

Redmi NOTE9 does not charge or turn on

NOTE9 today does not charge, do not start, connected to the charger, charging current 0.002, sometimes no. Access computer, 9008 mode. You can be sure that there is nothing wrong with the CPU.

Connect the charger, measure the charging interface, and have 5V. Measuring with 5V, but no output.

Direct air 330 degrees, air volume 80, add welding oil and welding, return to position, cool, reload into the casing, with charging icon display. The current is also more than 1A. It can be confirmed that it can be charged. But the user said that after shutting down, it didn't work again. So, turn it off and turn it on again. That's enough. Perfect repair.

Although it is a common problem, this process is worth learning. The only discomfort is that the price agreed before repair. Now the user is making a counter-offer.
