SCHEMATIC NAME:

SIZE: D

REV: 01

REF 6240-6299

The schematic diagram shows the VREG_CDC_1P2 voltage regulator circuit. The input is connected to B_PLUS_REG_VIN and VREG_S4A_REG_EN. The input capacitor C6291 (2.2 uF) is connected to the input. The output capacitor C6293 (4.7 uF) is connected to the output. The inductor L6292 (0.47 uH) is connected between the input and output. The voltage regulator U6290 (51016727001) is connected to the input and output. The regulator is powered by a TPS626751YFDR.

RFFE: GPS

REF 8500-8599

The schematic illustrates the RF front-end of a GPS receiver. It begins with an input signal from GPS_L1, which passes through a notch filter (B13 NOTCH) consisting of capacitor C8510, inductor L8501, and capacitor C8501. The signal then travels through two unbalanced ports (UNBAL_PORT1 and UNBAL_PORT2) of a component labeled FL8502, 91014407001, SAFFB1G56K80F0A. Following this, it passes through three filters (GPS_FILTER_0_50R, GPS_FILTER_1_50R, GPS_FILTER_2_50R) and capacitors C8508 and C8503. The signal then enters the AI pin of a BGAB24N6 component, which also has a PON pin connected to GPS_ELNA_EN via resistor R8510. The BGAB24N6 has VCC and AO pins. The output from the AO pin goes through more filters (GPS_ELNA_OUT_50R, GPS_LNA_OUT_1_50R) and capacitors L8503, C8507, and L8504. Finally, the signal enters another set of unbalanced ports (UNBAL_PORT1 and UNBAL_PORT2) of a component labeled FL8502, 91014407001, SAFFB1G56AC0F0A. The signal then passes through a WTR0_GPS_A_50R filter and resistor R8518 to SDR_GNSS. Power supply connections include RFFE_VDD_LNA, GPSLNA_VCC, and GPS_ELNA_EN.
