Series R for BCLKdesense - To ARC Amp and BOTSPK Amp

Bottom Speaker Amp

The schematic diagram illustrates the Bottom Speaker Amp circuit. Key components and connections include:

- U4902 CS3L27-60 WLCSP**: The central audio amplifier.
- Decoupling and Filtering**: Capacitors C4906, C4907, C4908, C4909, C4910, C4911, C4920, C4921, C4922, C4925, and C4926 are used for decoupling and filtering. Inductors L4901 and L4902 are used for output filtering.
- Input and Output**: The circuit includes inputs for BOT_SPK_VA, BOT_SPK_AGN, and BOT_SPK_FILTER. Outputs include BOT_SPK_FLY_CAP1_POS, BOT_SPK_FLY_CAP1_NEG, BOT_SPK_FLY_CAP2_POS, BOT_SPK_FLY_CAP2_NEG, and SPKAMP_BOT_COIL_OUT_POS/NEG.
- Addressing**: A 3x3 address decoder is used to select the AMP, AD0, and AD1 pins. The decoder is used to select the TOP, BOT, or ARC channel and address the AOP I2C1 and AP I2C2.
- Other Components**: The circuit also includes a 100K resistor R4900 and a 100K resistor R4901.
