G+Gyro Sensor

Schematic design notice of "77_PERI_SENSORS_MEMS_ALS/PS" page.

[M sensor] Keep a minimum distance of 15mm from power ICs / PCB traces of more than 100mA / magnet component. Check HW design notice for more detail

[A+G] For optimized GPS performance, please check HW design notice for Sensor selection guide

[A+G] MUST use SPI for optimized sensor hub performance **DO NOT USE I2C**

[A+G] Suggest choose sensor support FIFO watermark interrupt otherwise we cannot support Hifi-sensor, daydream VR. And Sensor-location accuracy will become worse.

[Baro] Reserve Baro sensor for LPPe feautre (Must for North America Operator / NA SKU)

DO NOT share Sensor hub I2C to other non-SCP device

Interrupt pin of MEMS sensor must be assign to ball EINT[12:0]
