

The image displays two blue printed circuit boards (PCBs) for the Sony WH-1000XM3 headphones, laid out on a green surface. The boards are symmetrical in design. Each board features a large black connector at the top, likely for the cable. Various electronic components, including resistors, capacitors, and integrated circuits, are visible on the surface. Two large, rectangular, silver-colored heat shields are prominent on each board. The left heat shield is labeled '219 #1' and has a '+' symbol above it. The right heat shield is labeled '218 #1'. The boards also have several circular mounting holes and smaller components like a QR code and a small black component near the bottom center.[illegible]
