SM-A530N

RF PART 2

TRANSCEIVER

The image shows a detailed PCB layout for a transceiver, specifically a 26MHz TCXO. The layout is organized into several functional blocks, each labeled with a component identifier and its value. Key components include:

- U2004 S5M9350X02**: A central integrated circuit, likely a microcontroller or processor, with numerous pins connected to various components.
- B2, B66**: A component, possibly a buffer or driver, with multiple pins connected to the U2004 and other components.
- B38/41**: A component, possibly a buffer or driver, with multiple pins connected to the U2004 and other components.
- B40**: A component, possibly a buffer or driver, with multiple pins connected to the U2004 and other components.
- B28**: A component, possibly a buffer or driver, with multiple pins connected to the U2004 and other components.
- 26MHz TCXO**: A temperature-compensated crystal oscillator, connected to the U2004 and other components.
- DC Block CAP needed**: A note indicating the need for a DC block capacitor in a specific area of the layout.
- TX, TR, RX, SW, etc.**: Various pins and components related to the transceiver's input/output, including TX, TR, RX, SW, and others.

The layout also shows the placement of various passive components, including capacitors (C1000, C1001, C1002, etc.) and inductors (L1000, L1001, L1002, etc.). The overall design is complex and requires careful attention to detail for successful implementation.
