		PAGE 63 OF 75	

The schematic diagram illustrates the B13 NOTCH circuit. It begins with an input signal labeled "IN" entering a component labeled "ANT_GPS_CUT_50R". This is followed by an inductor labeled "L8525" with a value of "3.3 NH" and a part number "24014052017". The output of this stage connects to another component labeled "ANT_GPS_3 CUT_50R". Following this, there is a series combination of two capacitors: "C8523" (1PF, 2113944E01) and "C8522" (4.7PF, 2113944E08). The circuit then branches into two parallel paths. One path contains an inductor labeled "L8521" (9.1NH, 24014052028) in series with capacitor "C8522". The other path contains capacitor "C8522" alone. Both paths recombine at a junction point. A dashed box encloses the components from the second antenna filter through the capacitors and the inductor/capacitor branch, with the label "B13 NOTCH" positioned below it.

A right-angled triangle is shown. The vertical side is labeled 'A'. The horizontal base is divided into two segments, with the left segment labeled '8' and the right segment labeled '7'. The hypotenuse is labeled '17'.
