Software Caution:
L16 Need to Config to 1.8V and turn on later than L17

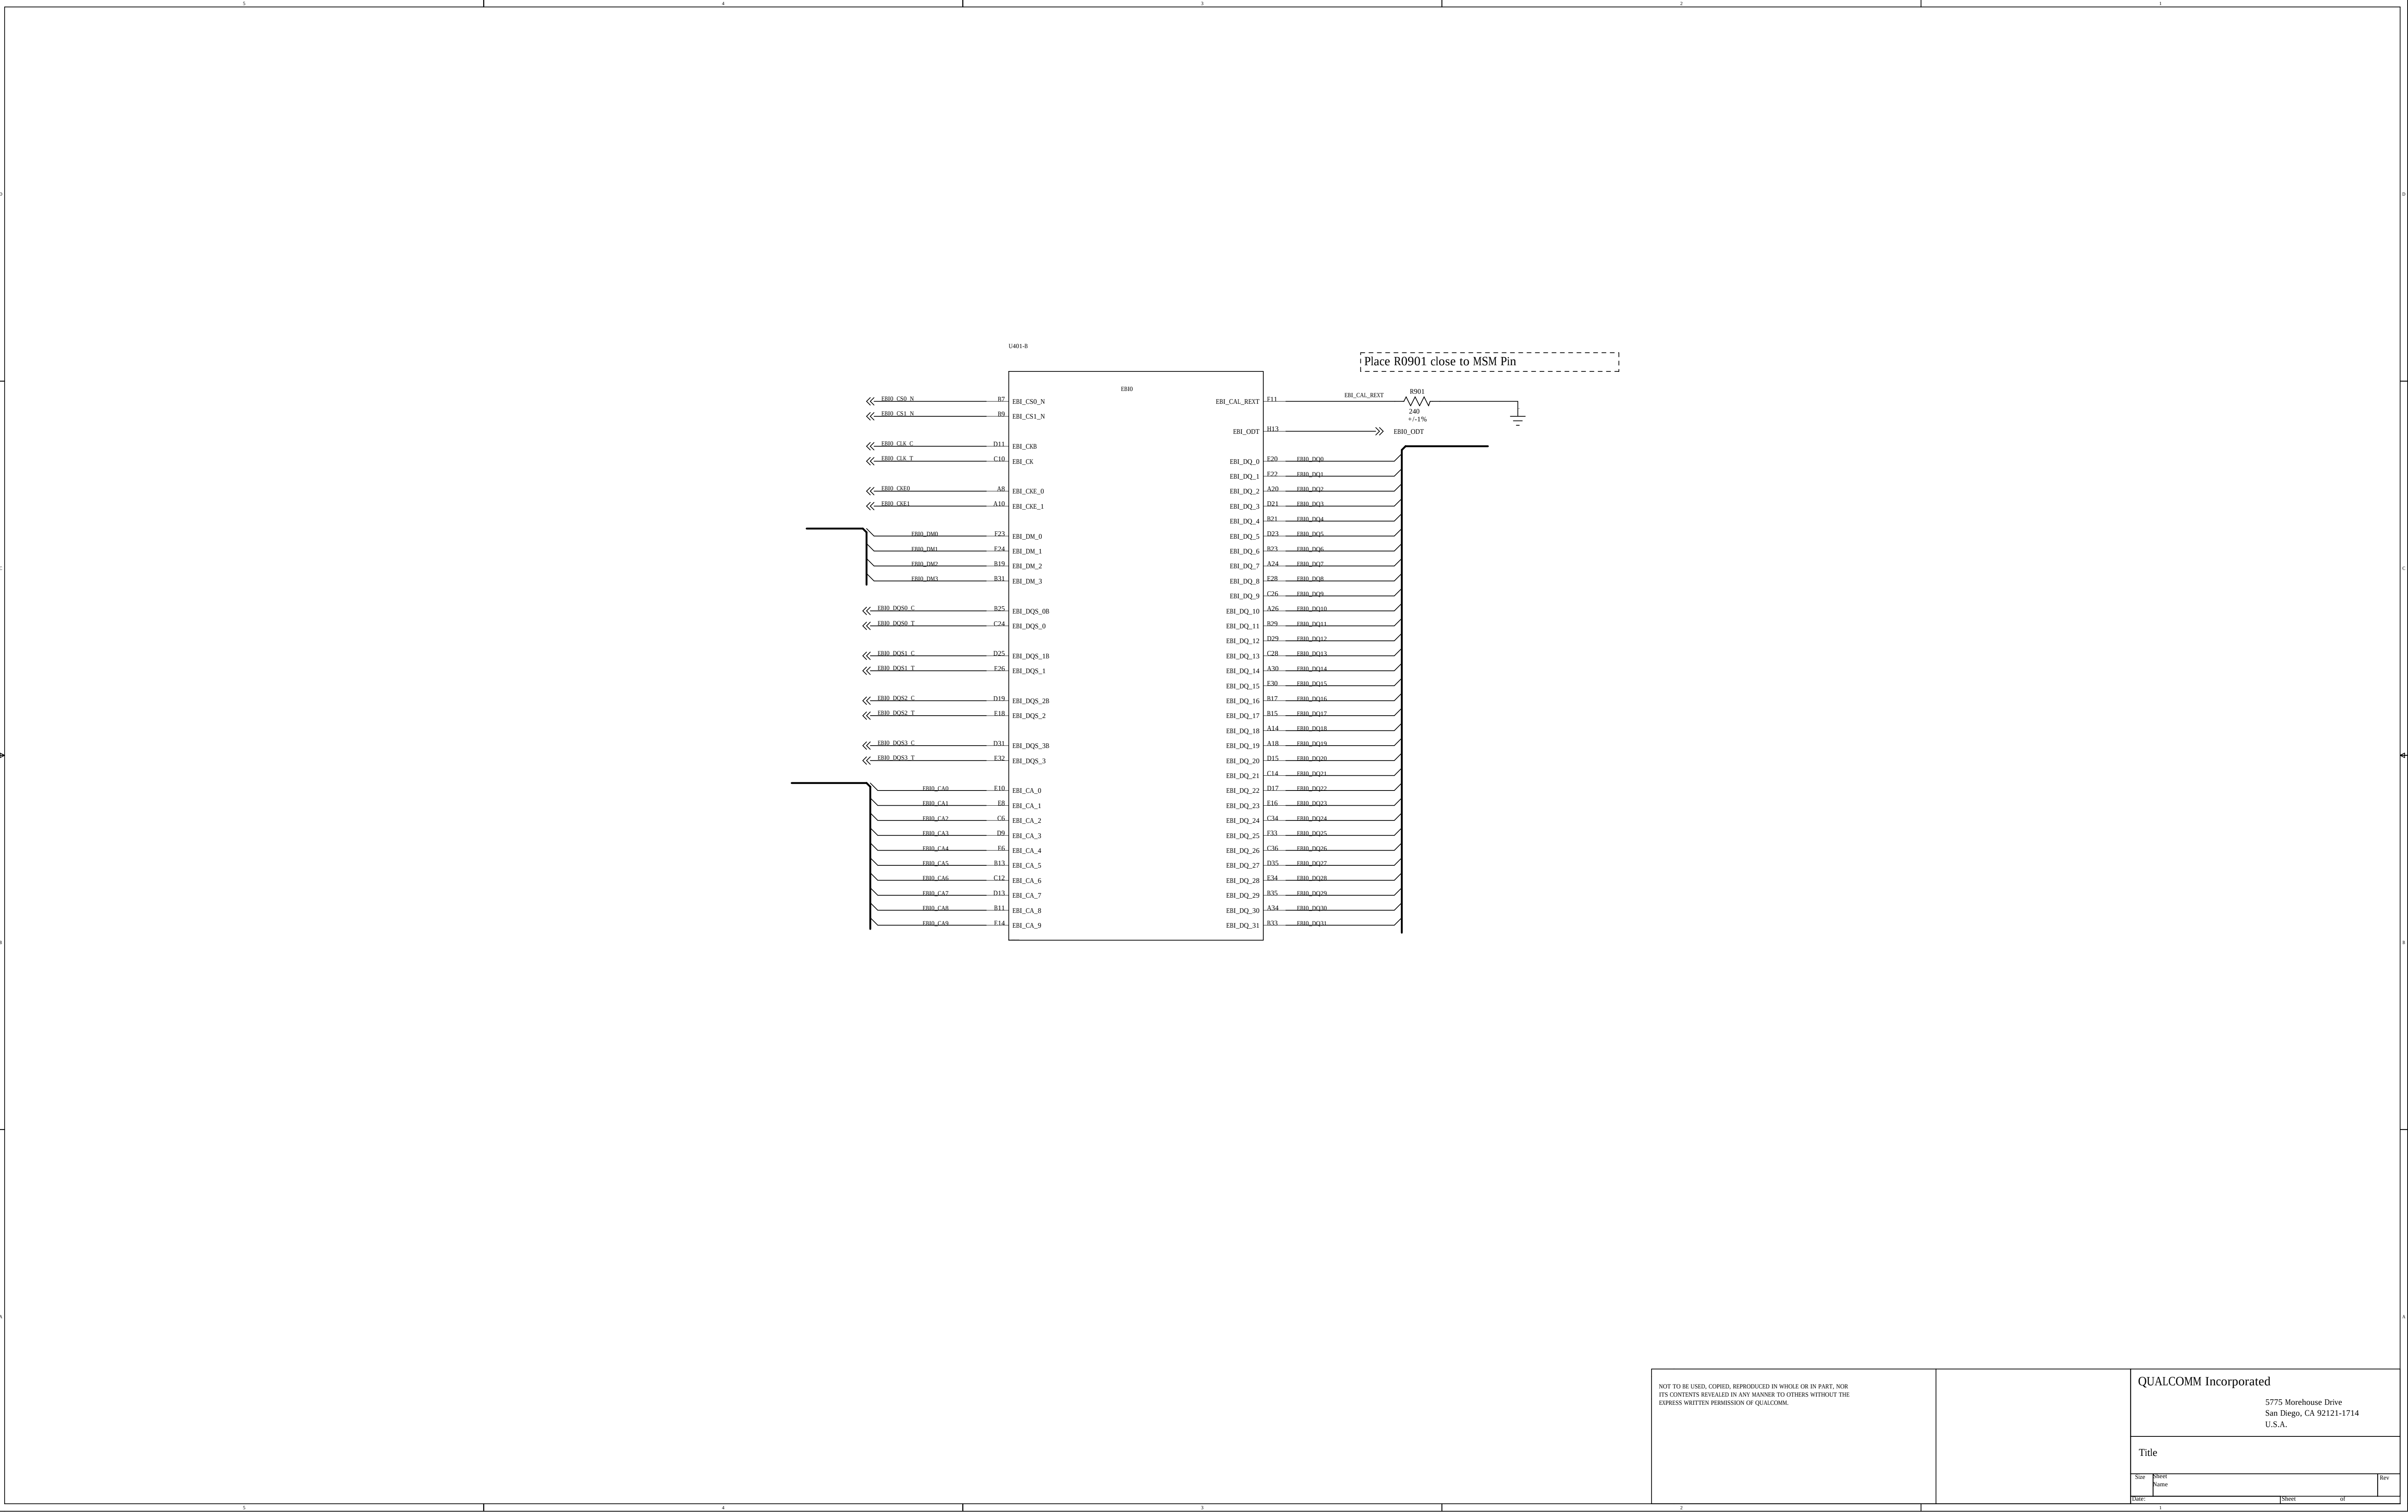

PSEUDO CAPLESS LDOs
L4, L5, L6, L7, L8, L9, L10, L11, L12, L13, L14, L15, L16, L17, L18

Local output capacitor can NC/Remove depends on remote load capacitors and PCB layout
LDOs L8, L9, L11, L17 each shall have total effective output capacitance of 4.7uF.
Please refer to PM8916 training slides(80-NK808-21) for limits on LDO output trace resistance and inductance
Rest of the LDOs shall each have total effective output capacitance of 1.0uF.

The Pseudo capless LDOs must comply to following tolerable routing requirement:
P50: R<400mOhms, L<45nH
P150: R<200mOhms, L<20nH
P300: R<150mOhms, L<18nH
P600: R<150mOhms, L<18nH

Please ensure when you DNI the output capacitor of Pseudo capless LDOs
the effective total capacitance at load side shall match above requirement

NC first

The figure is a large, empty rectangular frame, likely intended for a drawing or image. It is defined by a thin black border. The frame is positioned in the upper left portion of the page, leaving a significant margin on the right and bottom. The bottom right corner of the page contains a title block with the following information:

The figure consists of a large, empty rectangular frame. The frame is defined by a thin black border. Inside the frame, there is a grid of letters and numbers. The letters A, B, C, and D are positioned along the left and right vertical edges of the frame. The numbers 1, 2, 3, 4, and 5 are positioned along the top and bottom horizontal edges of the frame. The frame is currently empty, with no content inside.
